DATE : / /

Lesson 1: Order of operations

1) April/2018/Paper 1/ Q.4

A teacher asks her class to work out the answer to

$8 + (12 \div 4)$

Mike says that the answer is 5
He is wrong.

Explain why Mike is wrong.

because he added first instead of dividing [1]

2) Oct./2019/Paper 1/ Q.3

Work out.

$5 \times (4^2 + 2 - 12)$

$5 \times (16 + 2 - 12)$

$5 \times 6 = 30$

30 [1]

3) April/2020/Paper 1/ Q.1

Work out the value of $5^2 + \sqrt{121}$

$25 + 11 = 36$

36 [1]

4) Oct./2022/Paper 1/ Q.26

Work out.

$(23 - 3 \times 3)^2$

$23 - 9 = 14^2 = 196$

196 [2]

Scanned with CamScanner

April/2019/Paper 1/ Q.20

Calculate the value of

$2 + 8(40 - 5)$

35

$2 + (8 \times 35)$

$2 + 280 = 282$

282 [1]

6) April/2016/Paper 1/ Q.19

Put one set of brackets in each calculation to make the answer correct.

(a) $4 + 9 \times (6 - 4) = 22$ [1]

$9 \times 2 = 18$ $4 + 18 = 22$

(b) $24 \div (12 - 8 + 2) = 4$ [1]

7) Core

Put one pair of brackets in each statement to make it correct.

(a) $(10 - 4) \div 2 + 18 = 21$ [1]

(b) $7 \times (3 + 1) + 2 = 30$ [1]
